## **DETAILED ACTION**

### ***Inventorship***

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3,5,8-10,12,16-18,20 and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by Dosdall et al (US 5,117,681). Dosdall et al discloses a method for controlling an engine in a vehicle having a starter motor operatively connected to the engine, the method comprising: a controller 30 cuts off the flow of fuel to the engine; the controller begin an error measurement routine col. 4, lines 52-56; in step 37, correction

factors are calculated col. 5, lines 37-39; smooth engine rotation obtained by externally driving the engine, such as with the starter motor with fuel cutoff col. 5, lines 4-6.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3,5,8-10,12,16-18,20 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Downs et al (US 6,453,864) in view of Dosdall et al (US 5,117,681) and Peters et al (US 6,425,365).

Downs et al discloses a method for controlling an engine in a vehicle having a motor operatively connected to the engine the method comprising: means for sensing the crankshaft rotational orientation is provided col. 4, lines 13-16; employing the motor to spin the engine after fuel to the engine is discontinued.

Downs et al does not disclose determination of the engine position sensor correction factor; determining when an engine shutdown is requested. However, Peters et al discloses determining when an engine shutdown is requested. Dosdall et al discloses determination of the engine position sensor correction factor. It would have been obvious to a person having ordinary skill in the art to modify Downs et al by

employing engine shut down and correction factor determination features in order to reduce or eliminate the position measurement inaccuracies.

***Allowable Subject Matter***

Claims 4,6,7,11,13-15, 19,21 and 22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The reference by Boggs et al discloses controlled engine shutdown for a hybrid electric vehicle.
